

## LiveTrail & NEW GPS Tracking Feature

### 1. What is LiveTrail?

LiveTrail is the official Timing Partner of the Ultra Challenge Series – on the day of your challenge friends, family and supporters will be able to keep a virtual ‘eye’ on your progress along the course as you check into our rest stops – and NEW for 2025 they will also be able to track you along our online route map with a new GPS feature available for those who download the LiveTrail app.

### 2. How does it work?

#### Your Online LiveTrail Page

Each event will have its own LiveTrail timing website, with the names of all challengers whom are taking on each distance – by searching for your name and/or bib number (sent to you via email 10 days before the challenge) you will have your own ‘progress’ page for friends and family to view as you take on your challenge. After the event, your overall finish time will also be published here, as well as your Official Ultra Challenge certificate of completion.

#### Timings

Using the QR codes which will be printed on your bib (which you will attach on the day to your backpack/t-shirt), and the event pass worn around your neck, our team ‘scan’ you – as you start out on the challenge, and enter each rest stop – this puts an official ‘time stamp’ onto your online page and marks that you’ve reached that rest stop distance. Every time you reach a rest stop, the system calculates your pace, speed and expected time at the next check point.

#### NEW GPS Tracking Feature!

For 2025, LiveTrail has created a brand-new GPS Tracking Feature for the App that allows participants, family and friends to track their positioning on the route in real time. During their challenge, the participant will appear on the ‘Ranking’ graph from within their profile. This feature allows the participant to be followed along their challenge and accurately see when they are at Rest Stops and approaching the finish line, so you don’t miss any crucial moments.

This feature gives users the option to select how frequently the GPS signal is omitted from their device and would need to be turned on from the morning of their challenge. We recommend the Economy setting for long distances to preserve your device's battery.

### How to Use:

#### 1. Download the LiveTrail app

- The participant must install the LiveTrail app on their phone.

#### 2. Create an account if necessary

- If they don't already have an account, they should create one.
- **Important:** Use the same email address that was used when registering for the challenge.

#### 3. Access the runner's space

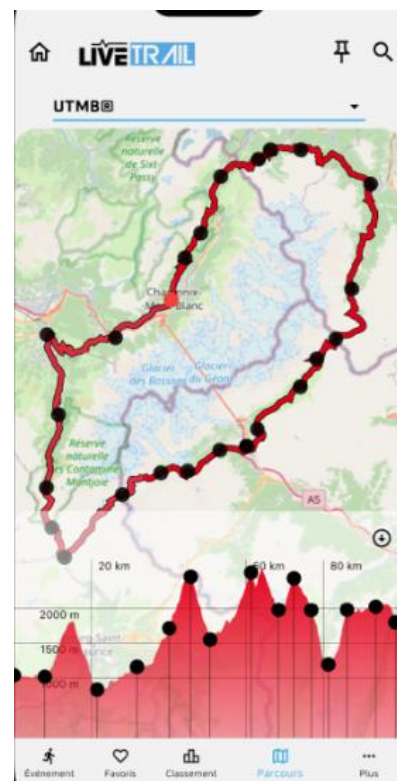

- Once logged in, the participant should go to the "Runner's Space" section in the app.
- The app will automatically detect them using their **BIB** number.

#### 4. Activate GPS tracking

- The participant must enable **GPS tracking** on their phone via the app.
- This will allow you to track their movements in real-time manually.

#### 5. Important note

- This GPS tracking is only meant to help you locate the participant manually.
- **It does not replace official timing.**

### 3. Where & when can I access the LiveTrail website?

The LiveTrail website and App will be made available to participants the week of their challenge, roughly three days before the start of the event. This will be published on the Ultra Challenge App.

You can download the LiveTrail App via the App Store or Google Play.
